Abstract:

--Methods for detecting and compensating for multiple optical signals produced in a
multi-mode fiber system are provided. A representative method includes detecting a
plurality of optical signals radiating from an end of the multi-mode fiber by a
multisegment photodetector having different detector regions that detect different
portions of the plurality of optical signals, and modifying detected signal in the
multisegment photodetector to reduce effects of modal dispersion among the plurality
of optical signals. Other methods also are provided.--
